

Technical Information: RWL-34

RWL-34 is a premium powdered metal tool steel supplied by DAMASTEEL®.

RWL-34 has a minimum 13% chromium with the addition of molybdenum and vanadium for improved corrosion resistance.

RWL-34 is characterized by high hardness, excellent resistance to corrosion, and excellent polishability

Typical Chemical Composition				
Carbon	1.05%	Chromium	14.00%	
Molybdenum	4.00%	Silicon	0.50%	
Vanadium	0.20%	Manganese	0.50%	

SBSM Tool Steel Properties Comparison

Mechanical Properties

Proof Strength	270 MPa
Tensile Strength	
Elongation	45%
Impact Value	60 Joules

Physical Properties

Modulus of Elasticity	(207 GPa)
Density	0.283 lb/in ³
	250-300 Brinell Hardness (BHN)
Machinability	Similar to 440C Stainless Steel

05-27-15

Technical Information: RWL-34

Heat Treatment

Annealing

Heat to 1400° F, hold five hours Slow cool 25° F/hour to 1000° F Then air or furnace cool to room temperature

Stress Relieving

Performed prior or after machining to minimize distortion in heat treating $1100/1200^{\circ}\text{F, hold two hours}$ then air cool to room temperature

Hardening

Salt bath, protective atmosphere, or vacuum furnace equipment preferred.

High Heat (Austenitizing)

1900/2000°F for 20 minutes at heat.

Quench

Salt bath quench to $1000-1100^{\circ}F$, equalize, then air cool to $150^{\circ}F$.

Vacuum or atmosphere quench rate of a minimum 50 degrees F per minute down to 1200F is critical to achieve best heat treat response.

Cool to $150^{\circ}F$.

Temper immediately following quench

Tempering

Double tempering is required, triple tempering recommended.

Air cool to room temperature between tempers.

Typical Heat Treat Response

Hardening Temp °F °C	Tempering Temp °F °C	Hardness HRC
1920 1050	430 220	59
	345 175	62

Thermal Conductivity Room T
200 F
W/m, degree C 15
